EDUCATION

Dallas College

Associate of Science, Computer Science — Transfer to UT Dallas expected Fall 2026

Dallas, TX

GPA: 3.87/4.0

EXPERIENCE

Freelance Web Developer — ULUX Nail Spa

Dallas, TX

Contract

2023 – Present

- Designed and prototyped a customer inquiry chatbot using HTML and JavaScript, saving clients an estimated 2+ hours of research and back-and-forth per interaction by answering common questions instantly.
- Grew Instagram following by 525%, directly contributing to a 40% increase in new clients discovered through social media.
- Managed content, branding, and scheduling workflows for a small business, increasing bookings and Instagram profile views by approximately 30%.

PROJECTS

100+ AI Agent Portfolio | JavaScript, HTML/CSS, Gemini API

hhanng.github.io

- Designed, built, and shipped 120 single-page AI-powered web applications independently in about 1 month, averaging 5–10 apps/day and exceeding the original 100-app target by 20%.
- Built interactive technical tools — including a LeetCode Pattern Trainer, System Design Interview Simulator, and Data Structures Visualizer — covering core FAANG interview topics for ongoing personal exam prep.
- Established a reusable single-page app architecture (HTML/CSS/JS + Gemini API) that cut average build time per new app from about a week to under 4 hours.

AI-Powered Telegram Reminder Bot | Python, Gemini API, Render

github.com/hhanng/reminder-bot

- Built a Telegram bot parsing natural-language input to schedule reminders synced with Google Calendar, handling 6–10 reminders/day covering schoolwork and daily tasks.
- Migrated from a deprecated SDK (google-generativeai) to google-genai across 3 model versions (gemini-1.5-pro → 2.5-flash), eliminating recurring API errors and improving reliability.
- Diagnosed and resolved production deployment failures across 2 hosting platforms (Fly.io, Render), achieving stable uptime with no reported outages since migrating to Render.

AI Email Drafter | React (JSX), Gemini API

hhanng.github.io/ai_email_drafter.jsx

- Built a mobile-responsive, two-panel chat/preview web app generating draft emails via the Gemini API; adopted by a non-technical family member as a daily tool for clearer, more confident email writing.
- Replaced hardcoded API credentials with a user-supplied key model, eliminating a security vulnerability and resolving intermittent CORS failures that had blocked browser-based requests.

Spotify Playlist Roaster | Python, Streamlit, Spotipy, Gemini API

spotify-roaster.streamlit.app

- Built and deployed a full-stack app integrating the Spotify Web API and Gemini API to generate AI-curated playlists and personalized critiques.
- Currently limited to 2 manually-approved testers under Spotify's developer-mode restrictions; submitted an Extended Quota Mode request to scale beyond the cap.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript

Frameworks/Libraries: React, Node.js, Next.js, Streamlit

Developer Tools: Git, GitHub, GitHub Pages, Render, WordPress

APIs: Gemini API, Anthropic API, Spotify Web API (Spotipy)
